

## G0 Pre-separator

G01

G02

G03

When a coarse or voluminous dust to be handled, your dust extractor may need to be supplemented with a pre-separator.

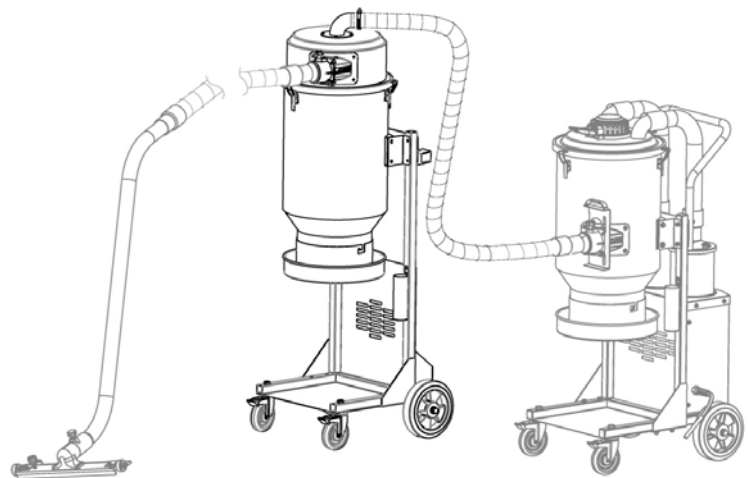

A pre-separator introduces an additional separation to captures more than 95% of dust before it can reach the dust extractor. Pre-separator can significantly improve filter performance and reduces frequency of filter maintenance. It also contributes to a higher airflow and an extended life time of filters and motor.

Thanks for its robust design, the pre-separators operates with a great reliability and virtually zero-cost maintenances.

G01/G02 is equipped with a drop-down continuous fold bag system for an effective dust collecting and bagging.

G03 is a dust bin / plastic bag version of pre-separator. With its built-in vacuum equalizer, it uses with a plastic bag very easy.

With the supplied hose and fittings, G01/G02/G03 can be easily connected with a dust extractor.

	G01	G02	G03
dust tank	13.2 us gallon	9.4 us gallon	10.6 us gallon
	50 liters	35 liters	40 liters
size of inlet	3" inlet with 2" adaptor		
	D75mm inlet with 50mm adaptor		
dimensions	21x22x53"	21x22x61"	16.5x16.5x32"
	54x56x135 cm	54x56x155 cm	42x42x81.5 cm

**A D50 x 1.5m hose assy. included**
